

6.A system for synchronization of the digital transmission of analog modem signals as recited in claim 1, further comprising a base Digital to Analog converter connected to said base formatting circuit.

[c7]

7.A system for synchronization of the digital transmission of analog modem signals, comprising:

(A) a base unit in communication with an extension unit; wherein

(B) said extension unit further comprises:

(1) an extension line interface circuit in communication with a user modem;

(2) an extension analog to digital converter connected to said extension line interface circuit;

(3) an extension timing / framing circuit connected to said extension analog to digital converter; and

(4) an extension transceiver connected to said timing / framing circuit, wherein said extension transceiver provides a signal to said base unit.

[c8]

8.A system for synchronization of the digital transmission of analog modem signals, as recited in claim 7, wherein said extension transceiver is an A/C Power Line Carrier transceiver.

[c9]

9.A system for synchronization of the digital transmission of analog modem signals, as recited in claim 7, wherein said extension transceiver is an RF transceiver.

[c10]

10.A system for synchronization of the digital transmission of analog modem signals, as recited in claim 7, wherein said extension transceiver receives a signal from said base unit.

[c11]

11.A system for synchronization of the digital transmission of analog modem signals, as recited in claim 7, further comprising an extension formatting circuit in connected to said extension transceiver.

[c12]

12.A system for synchronization of the digital transmission of analog modem signals as recited in claim 7, further comprising an extension Digital to Analog converter connected to said extension formatting circuit.

[c13]

13.A method of synchronizing the digital transmission of analog modem signals, comprising:

(A)generating a recreation clock signal from a received start bit of an asynchronous transmission;

(B)detecting said received start bit;

(C)receiving said start bit and a digital data signal serially from a transmission medium;

(D)converting said received digital data signal to an analog format; and

(E)transmitting a second digital data signal via a return path.

[c14]

14.A method of synchronizing the digital transmission of analog modem signals, as recited in claim 13, wherein said transmission medium is an A/C power line.

[c15]

15.A method of synchronizing the digital transmission of analog modem signals, as recited in claim 13, wherein said transmission medium is an over the air RF signal.
